Average Gross Profit %

-0,87%
Average of Gross Profit ...

Observation: The Daily Gross Profit % and Daily Gross Profit % Per Unit produce identical results because both metrics simplify to the same formula when only aggregate daily Sales, Cost of Sales, and Quantity Sold are available. Since both sales and costs are divided by the same quantity, the quantity cancels out algebraically. Therefore, there is no difference between these two metrics for this dataset.

Promotion Period 1

Price Elasticity of Demand 3

All three promotion periods exhibited elastic demand, meaning customers were highly responsive to price reductions. In each case, the percentage increase in quantity sold was greater than the percentage decrease in price. This suggests that promotional discounts were effective in stimulating demand for the product
